

ENERGY POLICY

Ulker factories, along with all their employees including top management, carry out production activities by making energy improvements, minimizing energy consumption, and without harming nature.

Our energy policy to achieve these goals includes:

- Maintaining an Energy Management System that is regularly reviewed, evaluated, and continuously improved by top management.
- Complying with all legal and other requirements related to energy that concern our organization.
- Raising awareness and sensitivity about energy consumption reduction through training provided to all employees to achieve efficiency targets.
- Identifying energy reduction opportunities by ensuring the efficient use of energy and information resources and analyzing energy consumption.
- Continuously improving energy performance by measuring it against objectives and targets, and reporting the results.
- Providing the necessary human, technological, and financial resources to achieve energy goals and objectives, and obtaining support from suppliers and contractors.
- Adopting a business model that enhances our global competitiveness by purchasing environmentally friendly and energy-efficient products and services and supporting designs aimed at improving performance.
- Implementing practices that are appropriate to the organization's purpose and context and support its strategic direction, meeting the needs of internal and external customers.
- Supporting the use of renewable/alternative energy sources.
- Contributing to sustainable development.
- Updating and reviewing the energy policy.
